Sequence 9, Application US/09866379

Patent No. 685365

GENERAL INFORMATION:

APPLICANT: BIOTORS CORPORATION

APPLICANT: SHORY, Jay

APPLICANT: SHORY, Jay

APPLICANT: BARTON, Nelson

APPLICANT: O'DONOGHUB, Elleen

TITLE OF INVENTION: RECOMBINANT BACTERIAL PHYTASES AND USES THEREOF

FILE REPERRNES: DIVERAIN 07

CURRENT FILING DATE: 105/09/866,379

CURRENT FILING DATE: 2000-05-24

PRIOR FILING DATE: 1999-04-13

PRIOR PILING DATE: 1999-04-13

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                          Sequence 341, Application US/09489039A

Patent No. 6610836

GENERAL INFORMATION:
APPLICANT: Gary Breton et. al
APPLICANT: Gary Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILLE REPRENCE: 2709.200401
CURRENT APPLICATION NUMBER: US/09/489,039A
CURRENT FILING DATE: 2000-01-27
PRIOR FILING DATE: 1999-01-29
PRIOR FILING DATE: 1999-01-29
NUMBER OF SEQ ID NOS: 14342
SEQ ID NO 341

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              720
                                                      Improving the nutritional value of phytate-containing foodstuffs, using phytase enzymes which catalyze the liberation of inorganic phosphate from
                                                                                                                                                                      The present sequence encodes a phytase enzyme from Escherichia coli B. The enzyme catalyses the liberation of inorganic phosphate from the phytate in phytate-containing foodstuffs and can thus be used to improve the nutritional value of phytate rich ingredients
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ઠે
                                                                                                       The present invention relates to novel dietary aids comprising sustained release biocompatible composition which comprises an agent (enzymes such as phytase, amylatas, esterase, protease) that assists in digestion. The biocompatible composition is effective upon oral consumption and release in the digestive tract of a subject. The dietary aids are useful for delivaring enzymes, therapeutics, medicine and agents to an organism. The use of enzymes and other agents in digestive aids of livestock or domesticated animals not only improves the animal's health and life expectancy but also assists in increasing the health of livestock or the production of foodstuffs from livestock. The present sequence is

The patent discloses recombinant bacterial phytase from Bscherichia colicity apply phytase. The enzyme has phytase activity and improved processes to tabeance when compared with wild-type phytase. It has improved procease tability at low pH. The recombinant phytase is useful for improving the recombinant phytase is useful for improving the untritional value of phytate-containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in vitro purposes related to research, discovery and development. They are also used for generating recombinant digestive system life forms, for producing or manufacturing alcoholic and non-alcoholic drinks based on the use of moulds, grains and/or plants, in biopulping and bio- bleaching where a reduction in the use of environmentally harmful chemicals that are traditionally used in the pulp and paper industry is desired and in the reduction or possible elimination of the need for mineral supplements, enzymes or therapeutic drugs for animals from the dealty feed thus increasing the amount calories and nutrients present in the feed.
                                                                                                                                                                                                                             New bacterial phytase for e.g. improving the nutritional value of phytate containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PheAlaGinSerGluProGluLeuLysLeuGluSerValValIleValSerArgHisGly 40

Isolated Escherichia coli polynucleotide encoding a modified phytase enzyme, useful in the production of animal feed, for improving the nutritional value of phytate-containing foodstuff and for enhancing gestion in humans and animals.

Claim 2; Fig 1; 62pp; English

The invention relates to an isolated Escherichia coli polymucleotide encoding a phytase enzyme appearing as ADA19450 and having amino acids modification from W688. Q84W, A95P, K97C, 8168E, R180Y, N25CC or Y277D. Also included the E. coli appA gene ADA19491 (or an oligonucleotide derived from it) or its mutant sequence ADA19422, expression vectors, onest cells, a method of improving nutritional value of a phytate-containing foodstuff by contacting the phytate-containing foodstuff by contacting the phytate-containing andicordal phytase enzyme mutated phytase (where the phytate in the phytate-containing a microbial phytase (comprissing culturing the plant cell, plant part or plant under conditions where the nucleotide sequence is expressed and converting the plant cells, plants or plants or plants or plants or plants or animals (composition for animals (composition) an expension an expressed on disease an expension an expressed on system which expresses a nucleotide sequence contain an expressed on system which expresses a nucleotide sequence contain an expressed on system which expresses a nucleotide sequence comprising a phytase enzyme, a transgenic plant which is modified to contain an expressed on system which expresses a nucleotide sequence compusing phytase activity. The phytate enzyme is useful for improving the having phytase activity. The phytate enzyme is useful for improving the invented method end different or in humans and animals. The invented method end end of phytate-containing foodstuff, in the production of invented method end ended envented ended e invented method improves thermal tolerance and protease stability. It also improves the feeding value of phytate rich ingredients. The present sequence encodes E. coli B wild-type phytase.

Sequence 1323 BP; 323 A; 353 C; 357 G; 289 T; 0 U; 1 Other;

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease is stability at low pH. The phytase enzyme can be used in foodsuuffs to improve the feeding value of phytate rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially significant avian species such as chicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, etc., in dough making and baking, in dietary aids for animals. The method provides easy manufacture of the active ingredient loaded biocompatible composition, higher yields and loading efficiency. The phytase tincorporated in to the dietary aid is safe for animals. The present sequence is Bscherichia coli B phytase DNA.
                             Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 361 GCCTTCGCCGCGGCTGGCACCTGACTGTGCAATAACCGTACATACCCAGGCAGATACG 420

```
The present sequence is that of a polymucleotide encoding the Escherichia coli B phytase. The present invention relates to a novel formulation, comprising at least one polypeptide having phytase activity, where the polypeptide is a modified sequence (AES75419) and the thermal tolerance maryer, comprising a series of mutations, improves the thermal tolerance carearyme, comprising a series of mutations, improves the thermal tolerance and protease stability of the protein. The specification also claims a pharmaceutical composition; a kit; an immobilized phytase; a fertilizer or soil additive; a liquid supplement for preventing muscle cramps; a chydrating agent; a tissue culture or cell culture media; and a plant food additive, all comprising the novel phytase, and a method of reducing collution and increasing nutrient availability in an environment or environment sample by degrading environmental phytic acid. The novel caryme is a dietary supplement useful for treating, preventing or cerversing osteoprosals or bone loss, and preventing muscle cramps. The cliquid supplement is useful for preventing muscle cramps. The cliquid supplement or environmental phytic caid, where the environment or environmental phytic acid, where the environment or environmental sample comprises a soil or a caid, where The immobilized phytase is useful in foodstuffs for improving the feeding value of phytate rich ingredients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ŭ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

```
Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.
```

Disclosure; Page; 74pp; English.

The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expression of the mucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme which has improved thermal tolerance and protease catability at low ph. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytase enzyme and fishes, commercially commercially and and and and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as plyg, goats, laboratory rodens, commercially significant avian species such as Ghicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially making and baking, in dietary aids for animals. The method provides easy manufacture of the active indicater. The phytase composition, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present sequence is Becherichia coll w phytase mutant DNA. Note: The present sequence is not shown in the specification but has been derived from the sequence is solventy.

```
The invention relates to a method for producing phytase that involves providing a nucleic acid encoding phytase derived from a bacteria, and expressing the nucleic acid in a yeast under conditions that allow expression of the enzyme in the yeast. The invention also relates to modified phytase enzyme in the yeast. The invention also relates to establisty at low pil. The phytase enzyme can be used in foodstuffs to improve the feeding value of phytase rich ingredients, and in diet of numerous animals including mammals, fowls and fishes, commercially significant mammals such as pigs, goats, laboratory rodents, commercially significant avian species such as Chicken, ducks, doves, parrot, etc., commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, commercially farmed fish such as guppy, zebrafish, molly, swordtail, commostion, higher yields and loading efficiency. The phytase incorporated in to the dietary aid is safe for animals. The present incorporated in to the dietary aid is safe for animals. The present sequence is Rangaroo rat Escherichia coli phytase mutant DNA. Note: The present sequence is shown in the specification but has been derived from Escherichia coli bhytase DNA ADOSO291.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Producing phytase, involves providing nucleic acid derived from bacteria encoding polypeptide having phytase activity, and expressing nucleic acid in yeast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ũ
